of franking machines

The FM50 Digital Mailing System

With IntelliLink®

Designed with flexibility in mind, the FM Series is powered by Pitney Bowes' IntelliLink® technology. IntelliLink® connects the FM50 to a secure server, via the Internet, enabling software updates and value added services, postal tariff changes and advertising slogans to be downloaded quickly and effortlessly.

In addition, the option of linking highly accurate weighing platforms to the systems or choosing the Pitney Bowes **Weigh-on-the-Way** technology ensures the correct postage every time. A single, user interface control panel, with PC quality display and a QWERTY keypad, makes these systems much easier to use than old style machines.

Streamlined technology helps the operator

Industry Innovation

- **IntelliLink® for instant updates** - an in-built, automated Internet connection provides instant on-line access to postal rates, software upgrades and value added postal services. IntelliLink® is accessed via a standard phone line with all functions handled from the central control panel. It's so simple to use, needing no special skills or training.
- **Differential weighing** - weighing platforms up to 35kg are available for heavier parcels providing accurate electronic weighing, saving up to 27% on postage costs. In addition, with our differential weighing technology, batches of mixed weight mail and parcels can be placed on the platform and the systems will calculate the value of each item when removed saving the operator a significant amount of time.

- **Streamlined processing** - automatically feeds, seals, franks and stacks up to 135 envelopes per minute.

And it's better for business too...

- **Future proof solution** - the FM50 is packed with industry-leading innovations ensuring your investment is kept current.
- **No delays in getting postage refills** - re-credit your meter with postage by simply pressing the button to activate the online connection to Pitney Bowes' Postage-By-Phone. Get up to 55 days' free credit, with Purchase Power post now pay later facility.
- **Increased productivity** - innovative design features such as advanced detection sensors, auto-class select and auto-tape mode, maximise throughput, reduce stoppages and minimise maintenance requirements.
- **Automatic advertising** - customise your messages by choosing from up to 10 slogans to promote your company and enhance the image of your mail.
- **Pre-date mail** - mail can be pre-dated up to 31 days in Advance giving the mailroom enough time to prepare mailshots.

- **No jams, crushed or torn envelopes** - the self aligning roller feed system keeps envelopes straight all the way through the machine, reducing stoppages and ensuring a perfect professional print finish. The drop down deck adjusts the gap between the rollers and the print/seal mechanisms to prevent envelopes from crushing.
- **Easy to use** - all controls are fully integrated on one clear control panel with user-friendly instructions to guide the operator through each stage of processing mail. The control panel swivels so that it can be seen from all operation angles. It easily detaches for connection to a phone line if required.

- **Regular jobs can be memorised** - up to 10 routine jobs can be stored as presets and automatically processed at the touch of a button.

- **Razor sharp digital printing** - produce professional looking mail every time with the patented single inkjet head to give your mail that "open me" look.

- **No fuss accounting** - the FM50 series offers you virtually unlimited accounting options. Up to 300 accounts can be stored on the control panel allowing you to track your postage costs. In addition, Budget Manager and MeterNet™ accounting options increase your accounting flexibility allowing you to set budgets, monitor mail efficiency and even turn your mailroom into a profit centre.

The FM50 Specifications

Physical Dimensions (including drop stacker)

Length: 1195mm
Depth: 530mm
Height: 380mm
Weight: Min - 27kg, Max - 29kg

Electrical

100-240V, 50/60Hz, 3A

Speed

Up to 135 letters per minute

Material Size

Minimum material size: 89 x 127mm

Maximum Material size:Length: 330 x 381mm

Material thickness: 0.2 to 8mm
